

Find a what3words address

Our search bar uses Google Maps data to show a location based on the street address or place name that you type in. That location is not yet very accurate – it might be the middle of your building, or on a nearby road. So make sure you follow all the steps to narrow the location down to the exact 3m square you need a what3words address for.

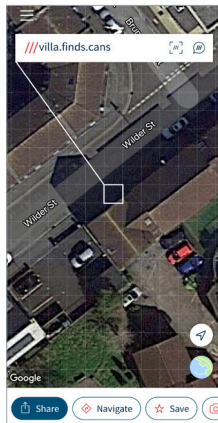

1. Tap the search bar, enter a street address or place name, then select the correct search result.

2. Zoom in and switch to satellite view to see more detail.

3. Drag the map if you need to, until you can see the precise location you want the address for.

4. Tap the exact square you need to see its what3words address display at the top of the screen.
